4	23/05/24	Moved to new ICB policy template. Review date agreed as June 2027	Senior Programme Manager	CPRG

1.0 Background

Many cases of carpal tunnel syndrome will resolve spontaneously and can be managed conservatively with physiotherapy, wrist splints, NSAIDs and steroid injections. The Gloucestershire ICB policy is consistent with the national Evidence Based Interventions (EBI) guidance, which sets out criteria that should be met before surgical treatment is considered.

2.0 Policy statement

The ICB will fund surgical treatment of carpal tunnel if one of the following criteria is met:

- a. The symptoms significantly interfere with daily activities and sleep symptoms and have not settled to a manageable level with either one local corticosteroid injection and/or nocturnal splinting for a minimum of 8 weeks.

Or

- b. There is either (i) a permanent (ever-present) reduction in sensation in the median nerve distribution; or (ii) muscle wasting or weakness or thenar abduction (moving the thumb away from the hand).

3.0 Patients who are not eligible for treatment under this policy

Patients who are not eligible for treatment under this policy may be considered on an individual basis where their GP or consultant believes exceptional circumstances exist that warrant deviation from the rule of this policy.

Individual cases will be reviewed at the ICB's Individual Funding Request Panel upon receipt of a completed application form from the patient's GP, Consultant or Clinician. Applications cannot be considered from patients personally.
